

# Cyber threats have evolved, and so have we.

Introducing Norton 360 Standard. Powerful layers of protection from the ever-changing threats to your connected devices, online privacy and identity.

Your personal information has protection when sent or received through your devices both at home and on-the-go with bank-grade encryption from Norton Secure VPN. It helps block cybercriminals from accessing your personal information when connecting to any Wi-Fi, even public Wi-Fi.

Screens are for demonstration purposes.

## NORTON 360 STANDARD

### Device Security

In addition to real-time protection for 1 PC, Mac®, smartphone or tablet against ransomware, viruses, spyware, malware and other online threats, additional security features include Password Manager to securely manage passwords and credentials online, and Cloud Backup<sup>1,2</sup> to store and protect important files and documents.

### Online Privacy

Worried about your online privacy? We've included Norton Secure VPN, a virtual private network service to encrypt your online activity, which is especially important on public Wi-Fi hotspots. We've also added PC SafeCam<sup>1,2</sup> to protect your computer's webcam from remote access attempts.

### Dark Web Monitoring

Cybercriminals can meet anonymously on dark web sites to make illegal purchases of personal information. Dark Web Monitoring<sup>3</sup> continuously patrols the dark web and private forums looking for personal information. We send you notifications should it be found.

Everyday activities like online shopping, banking, and browsing can expose your information, making you more vulnerable to cybercrime.

No one can prevent all cybercrime or identity theft.

# Multiple layers of protection for your devices and online privacy.

### Real-time threat protection for your device

Multi-layered, advanced security helps protect against existing and emerging malware threats to your devices, and helps you protect your private and financial information when you go online.

### 10GB Cloud Backup

Automatic, secure cloud backup for PCs – to store and protect important files and documents against hard drive failures, stolen devices and even ransomware.<sup>1,2</sup>

### Norton Secure VPN

Browse anonymously and securely with a no-log VPN. Add bank-grade encryption to help keep your information like passwords and financial details secure and private.

### Dark Web Monitoring

We monitor and notify you if we find your personal information on the dark web.<sup>3</sup>

### Password Manager

Easily create, store, and manage your passwords, credit card information and other credentials online – safely and securely.

### SafeCam

Get notified if cybercriminals try to use your webcam, and we can help block them.<sup>1,2</sup>
